

- A. Executive Summary: What are your main findings and recommendations, in a single paragraph?

UVA received a total of \$22,189,238 in foreign giving. Compared to the overall market, UVA is above the median of \$6,486,791.50 but still below the average of \$52,202,878.97, showing that UVA is doing relatively well but still has room to grow. England, one of the top three sources of foreign giving overall, is already an important source of gifts for UVA. However, Qatar and China, which are also among the largest sources of foreign giving, currently provide no recorded gifts to UVA. Saudi Arabia is another potential opportunity, contributing about \$1.07 billion overall while having no recorded gifts to UVA. I would recommend that UVA focus on building relationships with Qatar in particular because, besides being the largest source of foreign giving overall, Qatar has also contributed \$78.87 million to VCU, one of UVA's peer institutions. Overall, UVA has a good foundation in foreign giving, but it could increase its support by developing new relationships with major markets such as Qatar, China, and Saudi Arabia while maintaining its existing relationships with countries such as England.

- B. Summarize the results of your initial analyses of overall giving and giving to UVA (1-3 paragraphs).

Qatar contributed the most money overall with about \$2.71 billion, while England had the greatest number of gifts with 3,655. Carnegie Mellon University received the most foreign money overall at about \$1.48 billion, while UCLA had the highest number of gifts. Another thing that stood out was the difference between the average and median amount received by institutions. The average was about \$52.2 million, while the median was only about \$6.49 million. This large difference suggests that a smaller number of universities receiving very large amounts of money are pulling the average up.

Looking specifically at UVA, the university received about \$22.19 million in foreign giving across 98 gifts. UVA's largest sources of money were Bangladesh with about \$4.23 million, Sweden with \$4.01 million, and Tanzania with \$2.78 million. England was also important because it had the highest number of gifts to UVA, with 31. When comparing UVA with other Virginia institutions, VCU received about \$89.16 million and Virginia Tech received about \$11.79 million. This puts UVA between the two peers. UVA is also above the overall institutional median of \$6.49 million, but below the average of \$52.2 million, showing that UVA already receives a meaningful amount of foreign support but still has room to increase it.

- C. Describe a strategy for finding new potential sources of money for UVA. What countries or institutions should UVA target, and why? (1-3 paragraphs)

To find new potential sources of foreign money for UVA, we could look at where peer institutions and other universities are receiving their funding. For example, VCU's largest source of foreign giving is Qatar, with about \$78.87 million. Qatar does not appear as a source of giving to UVA, even though it is the largest source of foreign giving overall in the dataset. Because of this, Qatar could be a strong potential source for UVA to explore. China could also be another opportunity. Even though China does not appear as a major source for UVA or its Virginia peers, it is one of the largest sources of foreign giving overall and gives significant amounts to many U.S. universities.

UVA could also look at institutions that have been successful in attracting money from these countries to better understand where potential opportunities exist. For example, Qatar has provided large amounts of funding to Cornell, Texas A&M, Carnegie Mellon, and VCU. Saudi Arabia has also provided significant funding to institutions such as MIT, George Washington University, and George Mason University. Looking at the foreign funding received by these institutions could help UVA identify countries and donor markets where it currently has little presence. At the same time, UVA should continue maintaining its relationship with England, since England is one of the largest sources of foreign giving overall and has the highest number of gifts to UVA.

- D. Conclude with a summary of UVA's prospects for increasing foreign giving. (1 paragraph).

To conclude, UVA has good opportunities to increase its foreign giving by learning from institutions that already receive large amounts of money from major foreign sources such as Qatar, China, and Saudi Arabia. UVA should also look at the top sources of giving to its peer institutions and try to establish relationships with countries where UVA currently receives little or no funding. At the same time, UVA should continue strengthening its existing relationships with countries such as England. Overall, UVA is already receiving a meaningful amount of foreign support, but the data shows that there are still several large donor markets that UVA could explore to increase foreign giving in the future.
